Description

A good social media app looks nice and easy to use . My social media app name is Vivobook. When you open it for the first time , it welcomes you and asks for login and Sign up . After log in / sign up an interesting page will open in which you can see the posts, reels and story of your friends and group whom you follow . You can like , comment and share the post . You can also see reels by just tapping the reel option at the top . There is a search option to search people whom you want to follow and make them friend.

You can chat with them on the chat box. You can switch to chat box just by clicking on the message button given in the bottom layer . In the chat box you can send messages, photos and post very easily . You can make a video call by the video camera option and voice call just by swiping left the name of the person whom you want to make a call .

You also have your own I'd (account) interface from which you can choose your profile picture and description by the edit profile option. On this page your all photos and videos you post and the post you are tagged in are shown . Your number of followers, following and posts are also shown there . There is a share option to share your profile . You can switch on this interface simply by clicking on your profile picture at the bottom. There is a menu option at the top right corner of the page by tapping on that a slide bar will come with options of setting , activity , saved , parental control, QR code, best friend ,liked post help & feedback and log out . All these options increase the accessibility of the user .
